Top Skills

Requirements Analysis
Presales
Technical Discovery

Kessog Chan

Presales Consultant | Enterprise discovery, solution feasibility and value engineering | Telecom, banking and tech | AWS SAA in progress | Ex-Apple & Bank of China | MSc Business Analytics
United Kingdom

Summary

Presales and solution specialist with over 5 years of experience across enterprise B2B sales, product delivery and technical workshops. For the past 3 years I have worked closer to the technical side of the deal, moving from B2B account ownership at Apple into regulated product delivery at Bank of China, and most recently into a dedicated presales role covering a Tier-1 UK mobile network operator account. My experience includes running customer discovery and requirements workshops, validating solution feasibility before anything is committed in a proposal, contributing to roadmap and pricing decisions, and getting technical solutions adopted by stakeholders who do not report to me. What I am good at is transforming complex problems into clear buying decision. I can sit in a requirements workshop and follow what is actually possible, then sit in a pricing review and argue what it is worth. Specialties:

- Presales discovery and requirements analysis
- Customer focus strategy and GTM alignment
- Solution feasibility validation
- RFI/ RFP response material
- Live demos and stakeholder adoption
- Value engineering and pricing input
- Cross-functional and vendor coordination
- Process automation: finding work still being done by hand and replacing it with something that holds

Currently studying for AWS Solutions Architect Associate. London based, full UK working rights.

Experience

Huawei Consumer Business Group
Presales Consultant (B2B)
April 2026 - Present (5 months)
London Area, United Kingdom

Presales cover on a Tier-1 UK mobile network operator account, inside a 8-person team that owns the pursuit through to sales handover.

- Presales discovery: ran technical workshops and structured requirements session with the customer's engineering stakeholders, producing the requirements the bid was built on.
- Solution feasibility: tested the proposed solution against 6 of the account's subnets before anything was committed in a proposal.
- Roadmap and pricing input: took USD 2 of cost out of every unit by making the case across GTM roadmap and pricing reviews for dropping a feature the customer did not value.
- Programme ownership: own the evaluation unit programme end to end, tracking 60 to 80 live samples against launch deadlines, and wrote VBA automation that replaced a daily manual check with scheduled reminders and template-generated sign-off.

Bank of China (Hong Kong)

Technical Product Manager, E-Banking Product

August 2023 - October 2024 (1 year 3 months)

Hong Kong SAR

Owned end-to-end delivery for BOC Pay and the bank's e-banking platform in a regulated environment, from requirements through vendor management to cross-region launch.

- Regulatory delivery: met 100 percent of the HKMA's mandates inside a hard 14-day window, shipping Geo-IP fraud detection with impossible travel logic.
- Process improvement: replaced hand-assembled weekly reporting across 20 systems with a single Grafana observability view, handing back 8 hours a week. Got it adopted in one sitting, demoing to 30+ system leads and two department heads.
- Requirements and validation: specified and validated a Python anomaly detection prototype, built with a developer, that ended a 3-year-old complaint about incident triage across 50,000+ operational logs.
- Stakeholder coordination: arbitrated resource conflicts across competing projects, either absorbing dependent work or building the case for a timeline change.

Apple

4 years 1 month

Operation Data Analyst

July 2022 - August 2023 (1 year 2 months)

Hong Kong SAR

Turned frontline operational problems into internal tools across Apple's flagship retail sites, from discovery through build to multi-site rollout.

- Process automation: removed roughly 1,500 hours of manual work a year across 6 flagship sites by replacing a 5-hour weekly data entry burden at each with a self-sustaining reporting setup.
- Stakeholder influence: reversed a headquarters decision by showing the Shanghai development team evidence that store operations varied by location, moving a POS migration off centralised training onto store-specific delivery.
- Workflow design: recovered 400+ leadership hours a year by turning an 8-hour weekly interruption drain into a structured ticketing queue.

Business Expert

January 2020 - July 2022 (2 years 7 months)

Hong Kong SAR

Carried a B2B account portfolio out of Apple's flagship Hong Kong retail environment, running the full cycle from first contact through to corporate handover.

- Pipeline generation: brought in GBP 350,000 of new B2B pipeline across a 50+ account portfolio through discovery, solution positioning and qualification, then escalated matured accounts to the corporate team to close.
- Consultative selling: closed a GBP 50,000 deal with a Hong Kong broadcaster over 3 months, from a walk-in store visit to signed, clearing their device-management objection with an MDM upsell.
- Account onboarding: onboarded 12 portfolio accounts onto custom stores with post-sales service coverage.

Specialist

August 2019 - January 2020 (6 months)

Hong Kong SAR

Promoted into the B2B Solution Expert role after five months on the retail floor.

EchoRoaster

Data Infrastructure Intern

February 2018 - October 2019 (1 year 9 months)

Hong Kong SAR

> First forward deployment experience: bridged business and engineering in a healthcare AI startup — requirements discovery, data quality engineering, and UX prototype validation.

- Achieved 'zero-drift' alignment between business intent and technical execution by bridging two misaligned departments with a Formal Requirements Synthesis Framework — translating vague user stories into code-ready specifications.
- Designed a comprehensive Chinese-to-English parallel corpus for ML training by diagnosing data quality gaps blocking model performance — securing the development path for the company's first patient-centred MVP.
- Increased task-completion rates across 5 core user journeys through iterative discovery and Figma prototype validation, reducing design-to-development handoff friction by aligning both teams on the solution before build.

Education

University of Exeter

Master's degree, Business Analytics · (October 2024 - December 2025)

The Hang Seng University of Hong Kong

Bachelor of Science, Information Technology · (September 2018 - September 2022)
