

How to Create a Perfect Joint Business Plan with Global Partners

Strategic Partner Development Dept,

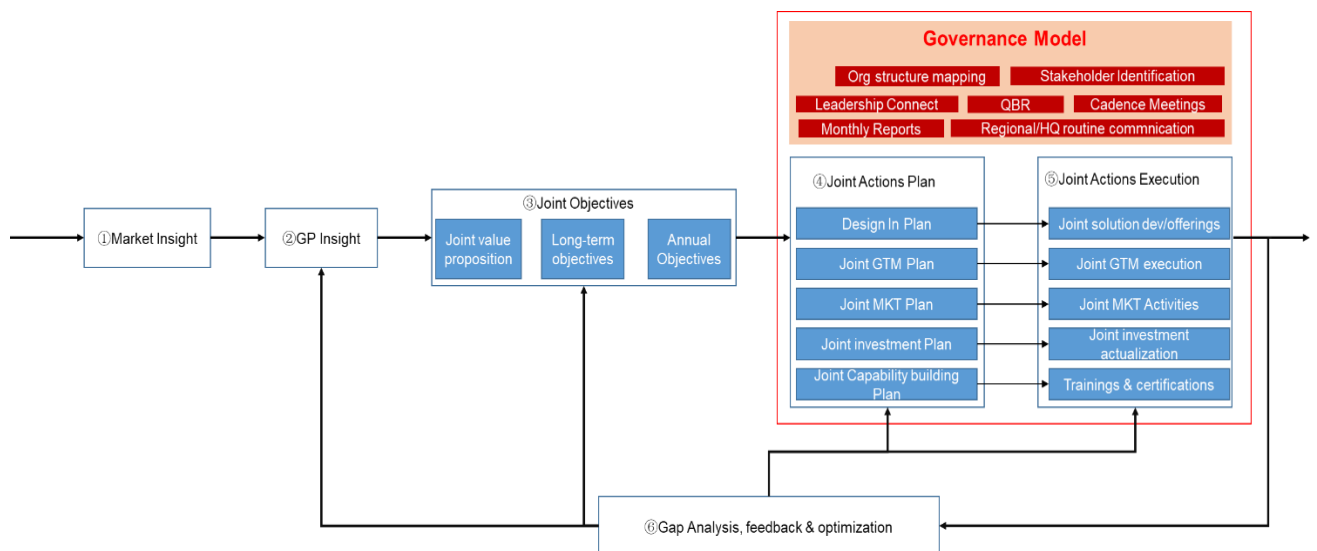

Shizhonglin 00509145, Jitendra Kumar Sharma 00902710

Keywords: Joint Business Plan (JBP) provides a framework for closely collaborating with Global Partners (GPs) by linking strategy with execution & focusing on core activities, commit to a plan, define success criteria and then deliver against it to achieve mutually agreed business benefits. This article introduces key components of JBP, and provides example as reference for readers to quickly master them. Due to space constraints, this article is intended to give a basic introduction, not a large and comprehensive detailed description. Actually, each key component can be studied as an independent case.

Abstract : Global Partner, Joint Business Plan, Joint objectives, Joint actions plan/execution, Governance model

Overview

Global Partners (GPs) are partners that cooperate with Huawei for business in multiple countries and regions. GPs are the mainstream players in different industries. The cooperation between Huawei and GPs is like Elephant -Elephant Tango, which requires strategic & systematic thinking, detailed planning & efficient execution. To effectively develop & successfully implement a business plan, we propose to divide it in 6 key actions as following:

This flowchart is intended to show how to develop GP BPs in an end-to-end manner. The ① step is to identify GPs that Huawei shall cooperate with Huawei through market

insight. The ② step is to do detailed insights into GPs, to understand their advantageous regions/industries/solutions, and sort out the cooperation points of with Huawei. The ③ step is to determine the long-term and short-term cooperation objectives through engagement with GPs. The ④ and ⑤ steps are to develop a joint development plan and ensure effective execution by building a good governance model. The ⑥ Step is to continuously optimize the previous actions by gap analysis and other feedback.

① Market Insight

The Market insight is a key part of developing business plan. It is a vast area consisting qualitative and quantitative assessment of a market to look into the size of the market both in volume and in value, the various customer segments and buying patterns, the competition, and the economic environment in terms of barriers to entry and regulation. We intend to focus here for GP business only. Within GP business, scope of market analysis varies based on Huawei ICT infrastructure products/solutions we want to sell to customers from specific category/industry/region, through which type of partners (e.g., SI/ISV/Industry/CSP/MSP/Consulting or any combination of them) and the final intended objective/outcome of business plan. It is a detailed study aligned with internal organization strategy about products/solutions, drivers of demand for products or solutions and which GPs can help us achieve it.

For GP business, market insight is a continuous exercise to feed right kind of information to develop, execute & course correct effective GP cooperation strategy. There could be multiple outcomes of market insight exercise based on targeted scope e.g., long list of GPs at global & country level, overall GP cooperation business scope, how competitors are doing, growth possibilities, market scope, need & drivers for specific joint solutions/design in, etc.

② GP Insight

High level GP insight is done during market analysis stage however a comprehensive GP insight is must to understand the overall partner business, key value propositions, customer base, core capabilities/activities/resources, revenue streams, organization structure, industry verticals, service lines, key business drivers, growth strategies and organization culture. An effective GP insight is key to target right subsidiary organization service line, industry verticals, geo regions, teams/stakeholders & solutions/services for design-in, to develop joint business.

Following is an example of one part of GP insight activity where we developed Business Model of Wipro through secondary market research, annual reports & discussion with multiple Wipro teams cutting across hierarchies to build a blue print of

their overall business.

Key Partners	Key Activities	Value Propositions	Customer Relationships	Customer Segments
Technology Alliances Manpower Resource & IT Vendors Technology Acquisitions Resellers Universities	IT Products IT Consulting Custom Application Design & Development System Integration Re-engineering & Maintenance Package Implementation CIS Analytics Services Business Process Services	Deep Technology Expertise Industry wide experience Portfolio of IT Services Vertically aligned Business model Proprietary products/solutions/AI/Automation tools to delivery better IT services Matured Product Engineering Services	Consultative & major Account Sales & Support Outsourcing Specialization Relationship sustainability	Large corporations SMEs Banking, Financial Services and Insurance Healthcare Consumer Goods Energy, Natural Resources and Utilities Manufacturing Technology Communications Government Network Equipment Providers Transportation Utilities IT Products
Key Resources		Channels		
Employees Infrastructure Patents Network Solutions CoEs AI & Automation products Brand & Culture		Direct Sales Indirect Sales Marketing & PR		
Cost Structure			Revenue Streams	
Employees Facilities Management & Admin cost Licensing Cost IT Cost Marketing Cost R&D Cost			Annual Outsourcing & Maintenance contracts IT Consulting Services Hardware reselling, installation & maintenance PaaS/SaaS	

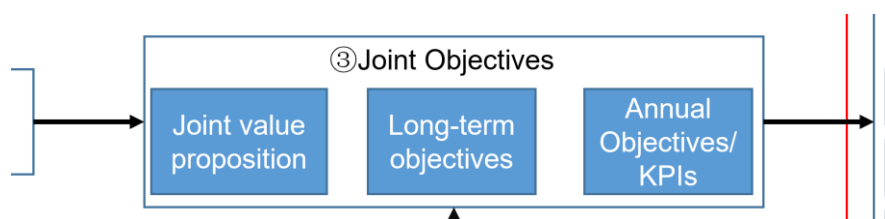

Wipro Business Model canvas

It helped us in defining right strategy for engaging with Wipro beyond just reselling, build deep understanding on their major sources of revenues, customers, expertise, sales cycles etc. & a very clear idea on how much effort is to be put on between pure equipment reselling route and joint solution/design in.

Outcome of GP Insight helps in developing joint value proposition and defining right objectives/KPIs aligning with Huawei & Partner business strategies & key focus areas.

③ Joint objectives

Joint objectives is the foundation of the cooperation between Huawei and GP. It integrates and complements the advantages of both parties to provide joint value to customers. Based on joint value proposition, via thorough discussion, both teams reach an agreement on the long-term objectives, annual objectives, and related KPIs.

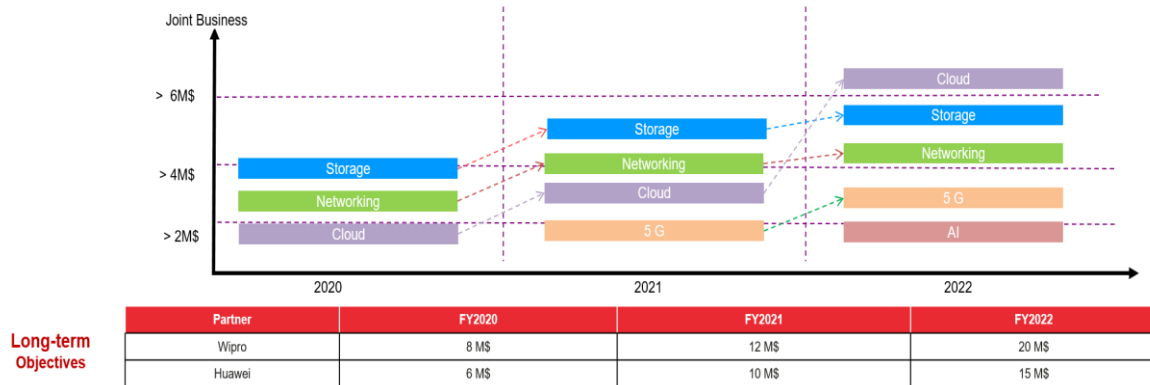

The following is an example for Joint Objectives with Wipro. We discussed with Wipro teams to reach the agreement, to combine Huawei's leading ICT infrastructure and

Wipro's rich industry experience to provide customers with end-to-end products and services, and to make Huawei & Wipro as preferred mutual partners in digital transformation opportunities globally. Focused cooperation domains and 3 year joint business revenue are listed as well.

Joint Value proposition

To combine Huawei's leading ICT infrastructure and Wipro's rich industry experience to provide customers with end-to-end products and services. To make Huawei & Wipro as preferred mutual partners in digital transformation opportunities globally.

Long-term Objectives

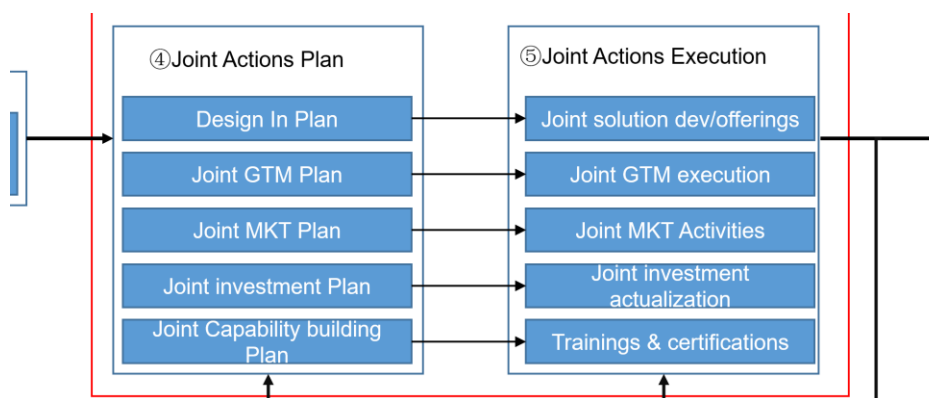

When we come to set up annual targets and KPIs, 'Huawei inside GP, GP inside Huawei.' key metrics are good reference, it is not only used to guide the work direction of Huawei GP manager, but also should be communicated with GPs, and then both sides can reach agreement as joint annual KPIs.

④/⑤ Joint Actions Plan/Execution

Joint actions plan and execution are the specific actions at the execution level, includes following five main actions. Other actions can be added if you think they are important to your partner.

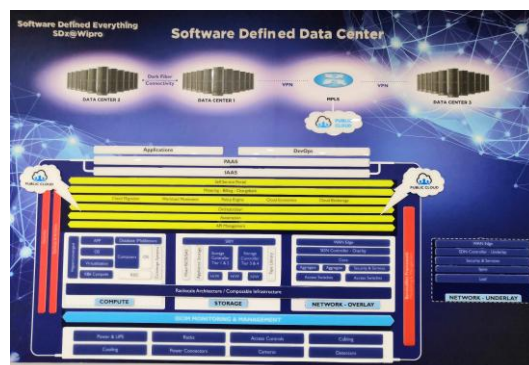

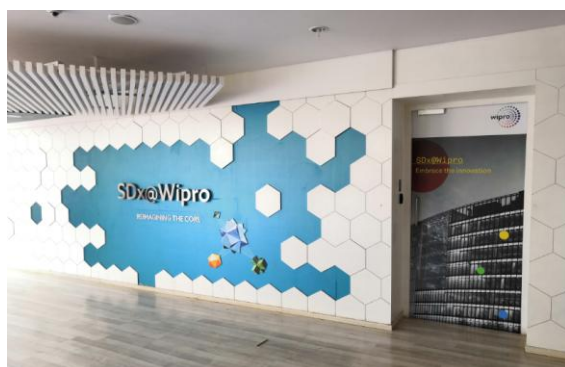

✧ Design In

Design in is the way to design Huawei leading ICT infrastructure products into GPs' solutions, to build joint vertical/horizontal offerings. Joint offerings are developed based on the respective advantages of Huawei and GPs, to provide joint offerings (differentiated competitiveness and unique value) to focused industries, customers.

- ✓ *Clearly describe the components of the solution, and the functions and features of each component.*
- ✓ *Scope responsibilities of the joint solution: What products and solutions does Huawei or GP provide? What responsibilities does Huawei or GP need to take?*
- ✓ *Define focused market regions, industries, and scenarios. Market Analysis & GP Insight information helps build it.*
- ✓ *Specify competitor analysis and core differentiated competitiveness.*

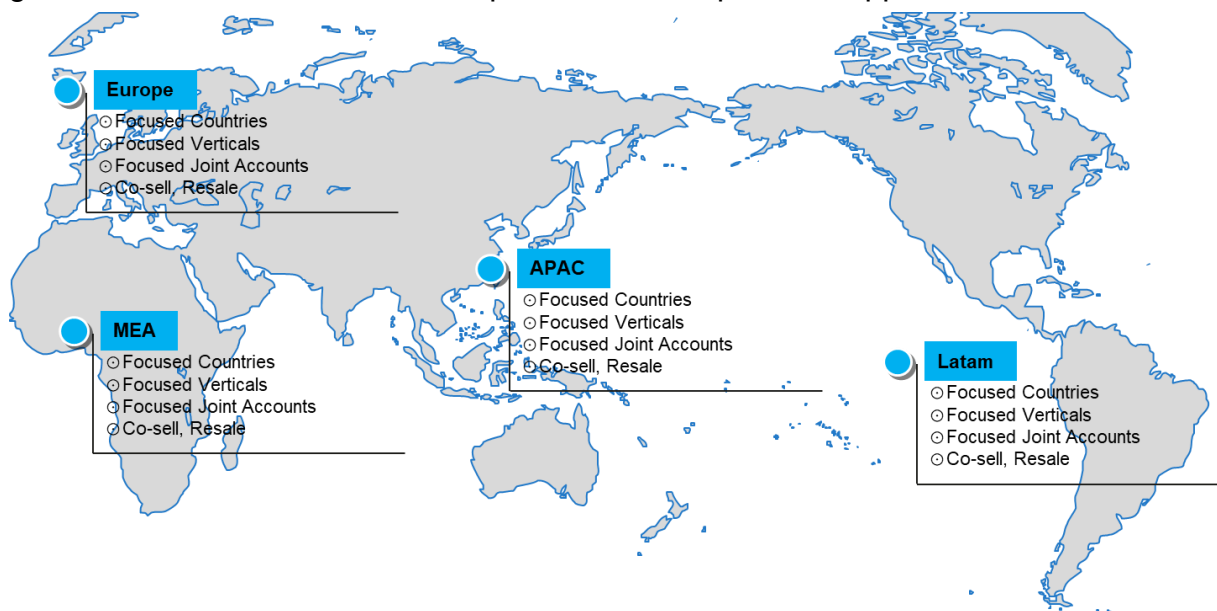

Center of Excellence (COE) is a common way for GPs and their partners to build joint solutions and demonstration centers. It is similar to Huawei's OpenLab. Indian IT giants, like Wipro, Infosys, Tech Mahindra, have established joint COEs with their partners in HQ labs, serving as joint development centers and customer demonstration centers. For example, more than 50 group global customers visit Wipro SDx Lab every year. It is a window for Wipro to demonstrate its joint Cloud & Infra innovation with partners. Design-In Huawei products within GP HQ lab to build joint COE, is a good way to increase the stickiness of both parties.

www.wipro.com/en-IN/themes/software-defined-everything--sdx-/

✧ Joint GTM

The joint GTM is based on the value proposition of the joint solutions and to output the focused countries, verticals, accounts and cooperation models in regions. Align with ground front line teams from both parties, to mine potential opportunities.

✧ Joint MKT

Joint MKT can effectively improve Huawei's brand image in focused business verticals through GPs' brand influence. Joint marketing activities include flagship event, 3rd party event, regional event, etc. The following template can be used to make the plan together with GPs.

Type	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
Flagship Event			HDC		Wipro WLC				Huawei Connect			
3rd Party Event		MWC			SAP Sapphire						SCEWC	
Partner Event			Huawei Eco-Partner									
Vertical Event		Huawei FSI Summit	Wipro Delivery Summit									
Regional Event											Huawei Eco-Connect	
Digital Marketing	EDM, WeChat, LinkedIn , Facebook, Twitter										Reference	

✧ Joint Investment

During the annual BP discussion, determine the joint investment plan of both parties is a good way to block related budgets in advance. (GPs SPOC need apply for budget at the beginning of FY). Generally, joint investment plan includes below catalogs:

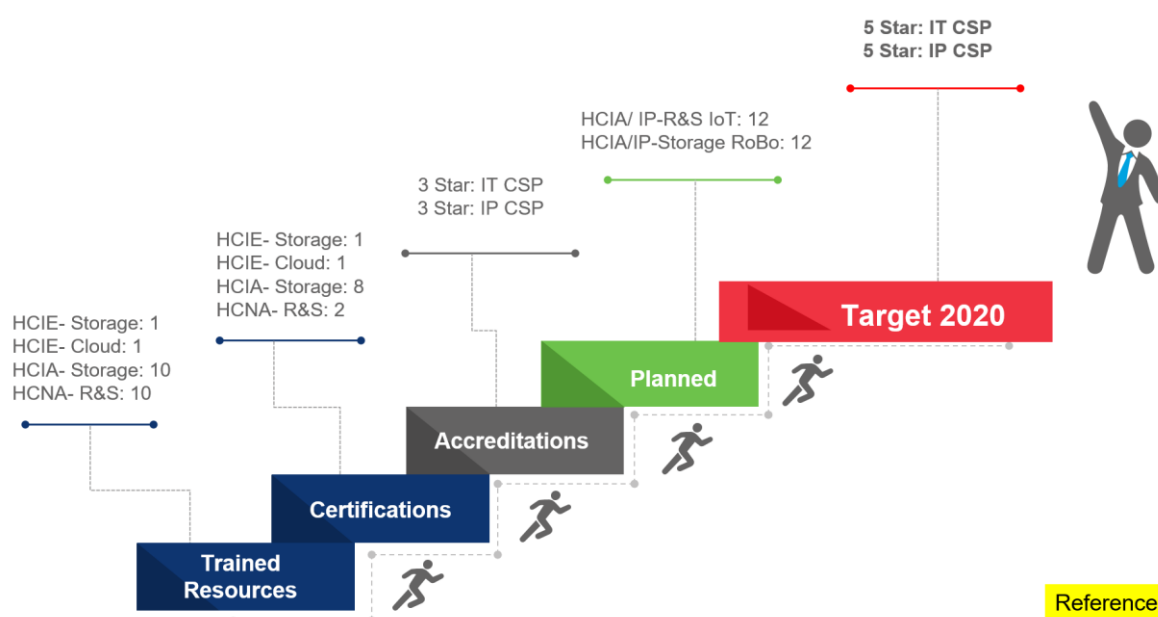

No.	Type	Description
1	Manpower investment	Alliance Manager, Pre-sales team, Delivery team, etc.
2	Training and enablement	Huawei products pre-sales and post-sales training cost, like training sessions, exam vouchers, etc.
3	Entry test	Hardware equipment cost, software licensee cost, engineers, HUAWEI CLOUD voucher, etc.
4	COE	Devices/Software/Applications required by the joint innovation center, exhibition center, integration verification center, and OpenLab;
5	Marketing activity	Expenses incurred in joint marketing activities, such as marketing/advertising expenses, sponsorship fees for branding activities, and marketing support expenses, etc.
6	Sales incentive	GPs related Sales performance incentive;

✧ Joint Capability Building

Joint Capability Building, is one part partner enablement, to develop trained & certified capability resources on Huawei products through workshops, training & certification programs, generate awareness about Huawei products/solutions across partner teams through technical workshops/webinars/demo/product & solution documents. Likewise, plan technical workshops from partners to Huawei teams to make them understand partner products/platforms/solution capabilities. Joint capability building plan is closely linked with Huawei inside GP KPIs and joint solution development/Design-IN plan.

Detailed plan to be created with talent alliance partner for targeted no. of certifications and CSP level whereas on-demand training & certification program need to be planned & executed based on project specific requirements.

Technical workshops from either Huawei or Partner sides are planned & executed as and when required during joint solution development activities.

How to do a good QBR?

- ✓ *Both parties reach an agreement on the QBR arrangement when communicating with the partner about the annual BP.*
- ✓ *Both parties create the QBR agenda together, including the time, place, and topic, and notify related personnel of both parties in advance.*
- ✓ *Both parties prepare the QBR slides together, including the quarterly objectives, cooperation progress, key projects, key actions, and difficulties and help-seeking requests.*
- ✓ *The best face-to-face communication, better than video conference/telephone conference.*
- ✓ *Take good meeting minutes and follow-up implementation;*
- ✓ *As the name suggests, QBR is held once a quarter. However, it is not a rigid conclusion. The key point is to establish the QBR based on the annual objectives of both parties and hold meetings in a regular and rhythmic manner.*

⑥ Gap Analysis, feedback & optimization

Gap Analysis, feedback & optimization is an integral part of business plan for effective monitoring & control and bring right checks and balances on whether cooperation is moving in a right direction by constantly comparing current situation/progress with agreed upon KPIs. This activity is closely associated with effective governance model practices where cooperation status is checked daily/weekly/fortnightly/quarterly through meetings/status reports among Huawei stakeholders and cadence meetings/status reports with partner stakeholders as part of well-defined communication plan.

The constant follow up on activities and feedback from all such checkpoints feeds inputs to each step for course correction e.g., whether execution of all plans are on right track, issues to be handled, risks to be mitigated, contingency plan to be developed for external/unforeseen risk , relationships in regions to be constantly checked & provide timely support, pipelines to be reviewed & monitored closely, whether plans themselves needs to be optimized, whether objectives have to be re-looked etc. This step enables bottom up and top down feedback loop to better control the cooperation progress though gap analysis & timely optimization for achieving KPIs.

Summary

To create a good Joint Business Plan (JBP) together with Global Partners can elevate the cooperation relationship to a level of strategic mutual trust. Actually, there is no fixed standard template for JBP. This article is a summary of JBP key components based on authors' GP development experience. For the editable templates of all components above, please check the Appendix 1 as your reference. Thanks.
