Presales engineer on a Tier-1 UK mobile network operator account at Huawei, and a builder outside it. Runs the front half of a deal: discovery, turning what the customer needs into technical scope, then testing what the account can actually carry before anything is committed. Hands-on experience building demos and tools, including a batch resume pipeline on GPT-4o and the OpenAI API that lifted simulated ATS scores by 19.4 points, and a Mistral API diagnostic that gives enterprise clients a structured way to prioritise AI investment. MSc Business Analytics, University of Exeter. No sponsorship needed.

WORK EXPERIENCE

Huawei Consumer Business Group

London, United Kingdom

Portfolio Solution Presales

Apr 2026 – Present

- Cut an hour a week of sign-off assembly and removed a daily hand-check of 60 to 80 live evaluation units, by writing VBA automation and a scheduled task that generate the documents and fire the deadline reminders.
- Kept the proposal to what the network could actually carry by validating solution feasibility across 6 of the account's subnets, as the dedicated presales cover inside a 5-person pursuit team.
- Produced the documented solution scope the pursuit was built on, across 3 technical workshops and one structured analysis session with the operator's engineering stakeholders.

Technical Projects

MSc Projects and dissertation

2025 – Present

- Cut high-risk false approvals by 24 cases per 100 and lifted correct approvals by 74 per 100, by debugging a credit scoring model at the data layer with SMOTE and oversampling, then making its decisions defensible to non-technical stakeholders through automated SHAP Trust Reports.
- Lifted simulated ATS scores by an average of 19.4 absolute points across a 20+ CV batch, by building a resume optimisation pipeline on GPT-4o and the OpenAI API and tuning it with 4 prompt engineering techniques including persona adoption and XML tagging.
- Gave enterprise clients a structured way to prioritise AI investment before a workshop starts, by building a diagnostic on the Mistral API that scores each use case on 4 dimensions behind an interactive web interface.

Bank of China (Hong Kong)

Hong Kong

Technical Product Manager, E-Banking Product

Aug 2023 – Oct 2024

- Delivered 100 percent of the HKMA's regulatory mandates inside a hard 14-day window by turning the regulation into an implementation plan and coordinating internal teams with third-party vendors to ship Geo-IP fraud detection with impossible travel logic.
- Handed back 8 hours a week of manual reporting across 20 systems, roughly 400 hours a year, by deploying a centralised Grafana observability framework in place of hand-assembled weekly reports.
- Closed a 3-year backlog in e-banking incident triage by specifying and validating a Python anomaly detection prototype, built with a developer, that separated real incidents from deployment noise across 50,000+ historical logs.

Apple

Hong Kong

Operation Data Analyst

Mar 2021 – Aug 2023

- Reversed a headquarters decision by presenting evidence that store operations varied by location, moving the Shanghai development team off centralised training and onto store-specific delivery.
- Secured adoption from all 6 flagship store leaders by demoing the tool myself, walking each of them through their own use cases and daily upkeep before handing over ownership.

Apple

Hong Kong

B2B Solution Expert

Jan 2020 – Mar 2021

- Generated GBP 350,000 in new B2B pipeline across a 50+ account portfolio by running discovery, solution positioning and qualification end to end, then escalating matured accounts to the corporate team to close.

EDUCATION

University of Exeter

Exeter, United Kingdom

Master of Business Analytics

Oct. 2024 – Dec. 2025

- **Merit** (Top 10% of graduating class)
- **Relevant Coursework (Top 5% of graduating class):** AI Governance & Predictive Risk Engine. Reducing False Positives by 24% through an optimised machine learning model auditing algorithmic decision-making.

ADDITIONAL INFORMATION

- **Languages:** English (fluent, professional), Cantonese (native), Mandarin (native)
- **Skills:** Rapid prototyping and live customer demos · presales discovery and technical validation · solution feasibility and architecture advisory · Python (pandas, data analysis), SQL, R, JavaScript, VBA · LLM APIs and prompt engineering (GPT-4o, OpenAI API, Mistral API) · agent and MCP workflow design · REST API integration and debugging · Docker · Google Cloud (hands-on exposure) · Grafana, Power BI, Plotly/Dash · JIRA, CRM
- **Interests:** Building AI tooling and agent-based knowledge systems · enterprise AI adoption · systems design
