Kessog Chan

B2B Solution Presales | Ex-Apple & Bank of China | MSc Business Analytics
United Kingdom

Summary

I sit at the unique intersection of Tech Architecture, Strategic Pricing, and High-Stakes Enterprise Solutions Support, with deep-rooted execution experience in both the UK and APAC tech ecosystems. Leveraging 5+ years across Tech Giants, Banking, and Cloud Infrastructure, including driving B2B solutions at Huawei UK, Apple, and Bank of China (IT Department), I do not just analyze data; I build the automated, AI-powered commercial engines that help UK businesses expand eastward and win multi-million dollar enterprise deals. THE APAC CROSS-BORDER EDGE [OBJ] Local Tech & Payment Deep Dive: Hands-on BA experience in system development and mobile payment ecosystems (such as BOC Pay), unlocking the tech landscape of the Greater Bay Area and Southeast Asia for Western leadership. [OBJ] Deal Governance & Pricing Strategy: Orchestrating high-stakes bidding, custom margin optimization, and contract readiness for Tier-1 enterprise accounts. I bring the rare capability to tune an LLM's structured output and model multi-million dollar deals for C-Suite decision-makers, ensuring your pricing models survive aggressive Asian market dynamics. [OBJ] Enterprise AI Execution: Built custom multi-agent architectures and tuned LLMs to compress operational friction by 50% through n8n and API integrations, turning complex cross-border manual operations into clean, automated workflows. TECHNICAL STACK & ECOSYSTEM KEYWORDS [OBJ] Deal Desk & GTM Governance: Deal Structuring | Cross-Border Pricing Strategy | Margin Optimization | Large Customer Sales Analytics | Value-Based Selling | Executive C-Suite Communication [OBJ] AI, Data & Automation: Python | SQL | LLMs (Structured Output Parsing) | RAG | Vector DB (Qdrant) | Multi-Agent Systems | n8n Automation | API Integration [OBJ] Operations & Compliance: APAC/UK Compliance by Design | Business Process Automation (BPA) | System Observability FUTURE OUTLOOK & STRATEGIC ROLE Targeting Revenue Operations (RevOps) Manager, Deal Desk Manager, Large Customer Sales Analyst, or International

GTM Specialist roles within UK-based AI SaaS, FinTech, and Cloud Infrastructure firms eyeing APAC expansion. I leverage enterprise pricing analytics, technical solution benchmarking, and hands-on AI execution to design profitable, frictionless global deals. Let's accelerate your eastward growth. Connect with me here or reach out directly at kesschan.kc@gmail.com.

Experience

Huawei Consumer Business Group
Portfolio Solution Presales
April 2026 - Present (4 months)
London Area, United Kingdom

Freelance | Self-Employed
AI Solution Assistant
October 2025 - March 2026 (6 months)
Dartford

> Freelance forward deployment for SME clients: diagnose business pain points, design AI-powered solutions, deploy to production, and measure impact. Every engagement follows the same cycle from discovery, build, deploy, iterate.

Bank of China (Hong Kong)
Technical Product Manager, E-Banking Product
August 2023 - October 2024 (1 year 3 months)
Hong Kong SAR

> Led a E-banking UX team owning end-to-end delivery for BOC Pay and Bank of China's e-banking platform in a regulated environment: stakeholder discovery, requirements translation, vendor management, prototype validation, compliance delivery, and cross-region launch.

- Delivered 100% of HKMA regulatory mandates inside a strict 14-day window by translating regulation into a technical implementation plan and orchestrating internal teams and third-party vendors to ship Geo-IP fraud detection with "Impossible Travel" logic, keeping the payments platform compliant under deadline.

- De-risked the BOC Pay launch across 4 global regions and saved 15 man-days of project budget by designing a follow-the-sun, 24-hour synchronised UAT plan built on timezone gap analysis.

- Recovered 1,000+ hours per year of cross-functional capacity, a 20-hour-per-week drain across 50+ teams, by deploying a centralised Grafana observability framework that retired 50+ manual weekly reporting touchpoints.
- Resolved a 3+ year legacy pain point in e-banking incident triage by mining 50,000+ historical logs and shipping a stakeholder-validated Python anomaly-detection prototype that isolated critical incidents from deployment noise.
- Cut 15 man-days of vendor-evaluation churn by converting fragmented infrastructure needs from 50+ teams into a prioritised vendor roadmap, validated through a Red Hat proof of concept.
- Unified 30+ product design specialists onto a single tooling roadmap by diagnosing the mismatch between legacy software and team procedures, synthesising 15+ behavioural data points, and securing procurement of the replacement.

Apple

4 years 1 month

Operation Data Analyst

March 2021 - August 2023 (2 years 6 months)

Hong Kong SAR

> Owing problem discovery phase through deployment for Apple's flagship retail operations, turning frontline workflow pain into internal products: diagnosis, requirements, zero-to-one build, and multi-site rollout.

- Recovered 400+ leadership hours/year by diagnosing an 8-hour/week productivity drain through workflow analysis and shipping a zero-to-one digital ticketing system, replacing ad-hoc support interruptions with a structured, store-wide-adopted queue.
- Contributed to a 15% year-over-year lift in customer satisfaction by running a structured voice-of-frontline discovery program, 20+ cross-functional round tables converted into a prioritized improvement backlog.
- Protected 100% operational uptime and sustained 92 NPS through the EasyPay POS migration by leading 10+ Floor Champions and translating technical requirements into floor-level execution playbooks.
- Eliminated ~1,500 manual hours/year across 6 flagship stores by surfacing a 5-hr/week/store data-entry burden in cross-site discovery and deploying a self-sustaining "Zero-Ops" reporting architecture, moving regional directors from lagging reports to real-time labour insights.

B2B Solution Expert

January 2020 - March 2021 (1 year 3 months)

Hong Kong SAR

> Consultative B2B account ownership: needs discovery, solution positioning, revenue generation, and workforce optimisation across Apple's flagship retail environment.

- Led diagnostic analysis of a 50+ account B2B portfolio to identify 12+ root causes of revenue variance, driving a strategic pivot from 100% reactive tracking to proactive account retention.
- Onboarded 12 B2B portfolio with custom stores, offering post-sales services.
- Generated GBP 350,000 in new revenue through consultative needs discovery and tailored solution positioning, securing 7 high-value strategic partnerships and achieving 30% regional market penetration growth.
- Resolved all peak-time scheduling conflicts for a 200+ employee workforce by designing a data-driven capacity model, recovering 5 hours/week of manual floor-planning effort for leadership.

Specialist

August 2019 - January 2020 (6 months)

Hong Kong SAR

- Resolved 21+ high-complexity technical inquiries daily through structured root-cause diagnosis and solution mapping — consistently translating technical complexity into accessible solutions.
- Maintained 95%+ NPS in a high-volume flagship retail environment, mapping product capabilities to specific user needs for dozens of customers daily through consultative solution positioning.

EchoRoaster

Data Infrastructure Intern

February 2018 - October 2019 (1 year 9 months)

Hong Kong SAR

> First forward deployment experience: bridged business and engineering in a healthcare AI startup — requirements discovery, data quality engineering, and UX prototype validation.

- Achieved 'zero-drift' alignment between business intent and technical execution by bridging two misaligned departments with a Formal Requirements Synthesis Framework — translating vague user stories into code-ready specifications.

- Designed a comprehensive Chinese-to-English parallel corpus for ML training by diagnosing data quality gaps blocking model performance — securing the development path for the company's first patient-centred MVP.
- Increased task-completion rates across 5 core user journeys through iterative discovery and Figma prototype validation, reducing design-to-development handoff friction by aligning both teams on the solution before build.

Education

University of Exeter

Master's degree, Business Analytics · (October 2024 - December 2025)
