Technical product manager out of regulated money movement. At Bank of China I ran e-banking and BOC Pay delivery where compliance set the launch gate: 100% of HKMA mandates cleared inside a hard 14-day window, Geo-IP fraud detection shipped against it, and an incident-triage backlog closed by specifying an anomaly-detection prototype with a developer. That is where I learned where a model earns its place and where a deterministic check has to hold. No neobank or Southeast Asia superapp on the record, the honest match is that regulated-delivery record: correctness over convenience, irreversible states, partners nobody controls.

WORK EXPERIENCE

Huawei Consumer Business Group

London, United Kingdom

Portfolio Solution Presales

Apr 2026 – Present

- Cut USD 2 per unit in product cost for a Tier-1 UK mobile network operator by making the case across GTM roadmap and pricing reviews that a feature carried no weight in the customer's buying decision, then removing it from the device configuration.
- Validated solution feasibility across 6 account subnets before proposal commitment, as dedicated presales cover inside a 5-person pursuit team.
- Cut the manual layer out of a 60 to 80 unit evaluation programme with VBA automation and a scheduled task, replacing a daily hand-check of every live sample with automated deadline reminders and cutting about an hour a week of sign-off document assembly.

Bank of China (Hong Kong)

Hong Kong

Technical Product Manager, E-Banking Product

Aug 2023 – Oct 2024

- Cleared 100% of HKMA regulatory mandates inside a hard 14-day window, shipping Geo-IP fraud detection with impossible-travel logic, by turning the regulation into an implementation plan and running internal teams alongside third-party vendors against the gate.
- Closed a 3-year backlog in e-banking incident triage by specifying and validating a Python anomaly-detection prototype, built with a developer, that separated critical incidents from deployment noise across 50,000+ historical logs.
- Kept competing projects moving by arbitrating manday conflicts across priorities, either absorbing dependent work directly or building the business case for a timeline change.
- Standardised requirements intake on a 7-question elicitation framework covering objective, context, stakeholders, success criteria, scope, constraints and evidence sources, closing gaps through follow-up interviews before anything reached JIRA.
- Recovered 8 hours a week of manual reporting effort across 20 systems, roughly 400 hours a year, by deploying a centralised Grafana observability framework in place of hand-assembled weekly reports.

Apple

Hong Kong

Operation Data Analyst

Mar 2021 – Aug 2023

- Defused rollback demands in the middle of a POS migration by showing store leaders the original report flow still ran as a fallback and committing technical support through the transition.
- Reversed a headquarters decision by presenting evidence that store operations varied by location, moving the Shanghai development team off centralised training onto store-specific delivery.

Apple

Hong Kong

B2B Solution Expert

Jan 2020 – Mar 2021

- Generated GBP 350,000 in new B2B pipeline across a 50+ account portfolio by running discovery, solution positioning and qualification end to end, then escalating matured accounts to the corporate sales team to close.

EDUCATION

University of Exeter

Exeter, United Kingdom

Master of Business Analytics

Oct. 2024 – Dec. 2025

- **Merit** (Top 10% of graduating class)
- **Relevant Coursework (Top 5% of graduating class):** AI Governance & Predictive Risk Engine. Reducing False Positives by 24% through an optimised machine learning model auditing algorithmic decision-making.

Hang Seng University Hong Kong

Hong Kong

Bachelor of Communication Technology

Aug. 2018 – Sep. 2022

CERTIFICATION: AWS Certified Solutions Architect, Associate (SAA-C03), exam scheduled 23 Aug 2026.

ADDITIONAL INFORMATION

- **Languages:** English (native), Cantonese (native), Mandarin (native)
- **Skills:** End-to-end product ownership · requirements elicitation and acceptance criteria · regulatory delivery against hard gates (HKMA) · third-party vendor integration · fraud detection and incident triage · UAT and launch management · observability (Grafana) · LLM product judgement: what a model may decide, human in the loop, evaluation · Python (pandas, data analysis), SQL · JIRA
- **Interests:** Payments and fintech infrastructure · systems design for regulated products
